SUMMARY

I am a professional programmer specializing in mobile applications and tools. I have experience developing native Android applications using Java and Kotlin, as well as cross-platform applications using Flutter and React-Native. My expertise includes developing social media applications using React-Native and Flutter, IoT applications using Flutter and Java, sensor-based applications using Java, and WebRTC-based applications using React-Native.

I strongly believe that programming is an art of thinking, and my focus has been on enhancing my programming skills rather than learning new languages. By continuously improving my knowledge, I can think more effectively and deliver innovative solutions. As a skilled and adaptable developer, I am eager to contribute my expertise to new projects and challenges.

CORE COMPETENCIES

Java, Kotlin, Android SDK, Flutter, Dart, React-Native, Git, Go, and JavaScript.

EXPERIENCES

Delivery Hero - Senior Software Engineer

Oct 2022 - Still working

I was part of a team responsible for the development and improvement of Delivery Hero's mobile app, which is primarily built using Flutter. My role involved collaborating with team members, identifying areas for improvement, troubleshooting issues, and implementing new features to enhance the app's functionality and user experience.

OBSS - Senior Software Engineer

Jun 2021 - Oct 2022

I worked as an Android Application Developer at Akbank via OBSS, where I was outsourced to one of Turkey's largest banks. In this role, I was responsible for developing and contributing to the existing features of Akbank's native Android mobile application. Specifically, I developed a complete KYC (Know Your Customer) flow for the app, ensuring regulatory compliance and a seamless user experience.

ARGELOJI - Mobile Application Developer (Flutter & Android)

June 2019 - July 2020

I developed features for BlueOperation's mobile app for Argeloji, enabling users to actively monitor asset locations and optimize search times in large facilities like airports.

POLYINGO (Mobile Application) - Full Stack Mobile Application Developer

May 2019 - Oct 2020

An innovative, interactive language learning application developed using Flutter (client-side) and Go lang (back-end). Offers a dynamic platform to learn languages through videos, AI-assisted chats, and engaging games. Features include word history management, customizable notifications, proficiency level targeting, and accent variation for a comprehensive and personalized learning experience.

CEKIRDEK BILGISAYAR, Istanbul Turkey - Mobile Application Developer

July 2017 - May 2018

Developed a social media mobile application using React-Native for cross-platform deployment, while also gaining hands-on experience in Java and Kotlin. This role provided invaluable exposure to various programming languages and frameworks, highlighting adaptability and versatility in the field of mobile application development.

OPCON (Mobile Application) - Full Stack Mobile Application Developer

Apr 2016 - Oct 2017

An **open-source** mobile messaging application developed in Java, offering users the unique ability to manage and control their devices through notifier-based interactions. As my first mobile application project, Opcon showcases proficiency in Java development and innovative thinking in creating user-centric, device management solutions.
