SUMMARY

I am a professional programmer specialized mobile applications and tools. I have been developing Android native applications with Java and Kotlin, and cross-platform applications with Flutter and React-Native. I have experience developing social media applications (with React-Native and Flutter), IoT applications (with Flutter and Java), sensor-based applications (with Java), WebRTC based applications (with React-Native).

I am learning new and innovator programming languages and paradigms just like Rust even if I don't work any related project with it. I have been focused on developing my programming skills rather than learning a new programming language. Because I believe that programming is a thinking art, so if I improve my programming knowledge then I can think better.

CORE COMPETENCIES

Java, Kotlin, Android SDK, Flutter, React-Native, Git, Go, Rust and JavaScript.

EXPERIENCES

ARGELOJI, Istanbul Turkey - Mobile Application Developer, Project Leader

June 2019 - July 2020

I have been developed BlueOperation's mobile application for Argeloji. BlueOperation offers RTLS solutions that can actively monitor the location of assets to optimize searching time in a wide range of area facilities such as Airports.
