SUMMARY

I am a professional programmer specialized in mobile applications and tools. I have been developing Android native applications with Java and Kotlin, and cross-platform applications with Flutter and React-Native. I have experience developing social media applications (with React-Native and Flutter), IoT applications (with Flutter and Java), sensor-based applications (with Java), WebRTC based applications (with React-Native).

I have been focused on developing my programming skills rather than learning a new programming language. Because I believe that programming is a thinking art, so if I improve my programming knowledge then I can think better.

CORE COMPETENCIES

Java, Kotlin, Android SDK, Flutter, React-Native, Git, Go, Rust and JavaScript.

EXPERIENCES

PATH - Product and Software House | Istanbul Turkey - Android Developer
Jan 2021 - Still working
At Path, we are developing the Tuttur.com mobile application with Kotlin.
path.com.tr
tuttur.com

ARGELOJI, Istanbul Turkey - Mobile Application Developer
June 2019 - July 2020
I have been developed BlueOperation's mobile application for Argeloji. BlueOperation offers RTLS solutions that can actively monitor the location of assets to optimize searching time in a wide range of area facilities such as Airports.
